Zana,

I've uploaded our Intune photos (Where we'd like to be) and our [12] screenshots (where we are now) to our secure SAOShare service as I did not want to upload this sensitive data to your Smartsheet platform. Both you and Jared should have gotten an invitation email to view these documents.

Thanks,

Shaun Marquardt, MCL, CISSP

Thanks for the details here Shaun.

Our [redacted] will be joining us for our first working session next week and we'll do a deep dive at that time.

This Message originated outside your organization.

We are in progress of testing intune policies ... so we would like to "move" to this but are currently leveraging mecm. Intune is a work in progress and needs testing since it's significantly different than [redacted] especially regarding attack surface reduction. There's more to this so a call to explain and show you what I've mapped over the past couple months would be beneficial.

Hi Shaun,

In lead up to first working session next week for the Defender work stream, I'm hoping you (or another team member) can review the attached document and capture some details along with a handful of screenshots for us to review.

I've granted you access, along with Michael, Robert, Jenn and Aaron, to the Project Plan in Smartsheet. Here's a link: Project Plan - SAO - Smartsheet.com.

Can you please create and upload a document with the file/policy names along with the screenshots we're looking for as an attachment(s) to the Project Plan?

- On the right hand side, you'll see a paper clip
- You'll see a button to attach files
- From there, select the document with the file/policy names and screenshots and upload

Please let me know if you have any questions or concerns.

Thanks,

Zana Amin
