Hi Kevin!

Yes, SAO is on [12] right now. The security vulnerability only applies to sites that actively use the Comment module. SAO does not utilize this module, so even if it were still on [12], it would be safe.

Thanks for the email and check in.

-Dan

Subject: FW: Drupal Releases Security Advisory for Drupal Core

Hi Dan,

What version of Drupal does sao.wa.gov use? It looks like a security vulnerability has been found for Drupal versions [redacted] [12]

Looking at the site, it appears that [12] is currently being used, which would mean that the site is NOT affected by the security vulnerability, but I wanted to confirm with you.

Thanks,

Kevin Beshears

Happy Thursday Gentlemen,

Can one of you reach out to Aaron and work with him to make sure his concerns are either squashed or resolved? See the messages below for context.

Thanks,
Sam Tenny

Heads up, Sam.

I'll take a look at what we have on our site and see if this impacts us, but I recommend you ask your team as well on what version we have.

See below email.

Aaron

Drupal Releases Security Advisory for Drupal Core

01/18/2024 11:10 AM EST

Drupal released a security advisory to address a vulnerability affecting multiple Drupal core versions. A cyber threat actor could exploit this vulnerability to cause a denial-of-service condition.

CISA encourages users and administrators to review Drupal security advisory SA-CORE-2024-001 for more information and apply the necessary update.
